Spray Injection Patcher

Air Stream T-M

Cleans, tacks, fills, and compacts in one continuous operation.

CRAFICO INC
PRESEVATION PRODUCTS PAVEMENT
Delivering Confidence Through Innovation, Quality and Value Since 1976
Crafco’s Spray Injection Patching concept and technology is combined into the Air Stream T-M, self contained, truck mounted patching system. The Air Stream T-M’s gravity flow, on-board aggregate hopper is capable of delivering up to 5.25 tons of patching material per hour, making this unit efficient and the most maneuverable patcher in Crafco’s Spray Injection Patcher line. The Air Stream T-M is ideal for repairing potholes, deteriorated shoulders, utility cuts, fissures, and for skin patching alligator cracked areas. As with all other Crafco Spray Injection Patchers the Air Stream T-M cleans the repair area, applies a tack coat, coats the aggregate with emulsion, and then applies and compacts the mixture in one easy continuous operation. The material application process variable material velocity for complete compaction, density and coverage using the heaviest gauge steel venturi available for long life. This effective application and material compaction process virtually eliminates any voids in the repair. The aggregate mixture application is assisted by a counterbalanced boom which features the emulsion and aggregate controls at the operators fingertips. The boom has a wide 360° sweep covering over 1,200 square feet of working area. The Crafco Air Stream T-M Spray Injection Patcher gives you complete control of your pavement preservation, from the smallest repair to the largest; quickly, effectively, and efficiently.

Features:
- Self contained
- Truck mounted; the Air Stream T-M can be removed so you can use your truck for other uses
- Fingertip controls
- 5.25 tons per hour production
- 2 year venturi warranty
- Maintenance-free heating system
- Few moving parts
- Air feed delivery system
- Aggregate hopper vibrator
- Adjustable boom height
- Crafco quality

Options:
- Crack filling attachment
- Strobe light kit
- Electric throttle
- 4, 5, or 6.5 cubic yard capacity aggregate hopper

Dimensions: 192” L, 90” W, 88” H with ~6,600 lb ship weight

Truck Requirements
1. Truck must have a minimum 33,000 lb (14966 KG) GVWR.
2. Truck frame rail must be 34 inches (86 cm) outside to outside dimension.
3. The truck frame length from back of cab to end of frame rail must be a minimum of 175 inches (444cm).
4. Back of cab to center of rear axle length must be a minimum 140 inches (355cm).

The Crafco Spray Injection Patcher is the only piece of pavement preservation equipment documented by every major trade publication, the US Department of Transportation and customers to be “better than hot patch” and “to have no equal.”
