

Model 30™

Pavement Router with Dust Control

First pavement router designed to control dust

- *Greater than 96% reduction in dust*
- *Emits 1.25% average dust opacity*

Choose the Dust Control Router because it provides:

- A cleaner working environment
- Improved worker safety due to less dust and flying debris
- Easier clean-up of the asphalt debris trail saving time and money
- Extended life to the air filter and engine

Model 30 Pavement Router with Dust Control

The Crafcro Router has been the industry standard for over thirty years. There is no better way to effectively and efficiently create sealant crack reservoirs than with the Crafcro Model 30 Pavement Router. Its lightweight mobile design, unique center of balance and cutter head alignment makes it easy to operate and deliver unsurpassed crack following accuracy. Routing cracks will prolong pavement life, will prolong sealant life and prevent potholes.

- *Ergonomic Handle Design* - Ergonomic handle design allows for better depth control and handling.
- *Carbide Skid Plate* - Carbide skid plate reduces wear for longer life, increases crack tracking accuracy and makes router operation smoother and easier.
- *Cutter Head Shroud* - The Cutter Head Shroud contains debris and dust during the crack routing operation.

Routed Cracks increase crack seal longevity.

Why Rout Cracks?

Pavement preservation has never been more important because of limited budgets and an abundance of roads that need repair.

Make your budget go further and preserve pavement longer by routing cracks. Cracks that are routed prior to sealing perform more than twice as long as cracks that were not routed.

Contact your Crafcro representative to learn about cost effective treatments to preserve your pavements.
