

Marker Adhesive

Keep Road Markers Where You Want Them

Safe roadways rely on pavement markers. Keep your road markers in place longer with **Crafco Hot-Applied Flexible Pavement Marker Adhesive**. Compatible with most marker types, this impact-resistant adhesive is a higher performing adhesive than standard bituminous marker adhesive, temporary butyl pads or brittle epoxies. Thanks to specialized polymer additives, it stays flexible through a wider temperature range. That means up to 50% fewer markers lost to snowplows in winter and more stability against twisting and slipping in summer. Crafco's flexible adhesive cures within minutes, minimizing traffic disruptions. Upgrade your marker placement with Flexible Pavement Marker Adhesive.

BENEFITS

- More resilient than butyl pads or epoxies
- Fast curing for quick installation
- Compatible with asphalt and concrete pavement
- Significantly reduces marker loss in both winter and summer

Reliable Performance, Every Time

SHOT TIMER KIT

Speed up your installation with the Crafcro Shot Timer Kit to dispense a uniform amount of material with each trigger pull. Customize the timer to dispense your desired adhesive amount for precise application. Whether upgrading an existing melter or ordering the kit installed from the factory, you can set up a dedicated melter for marker adhesive or simply turn the Shot Timer on or off as needed.

Uniquely formulated with premium ingredients, Crafcro's Marker Adhesive remains flexible at temperatures down to 20°F (-7°C) and is specified by several state Departments of Transportation for its remarkable durability. Studies document 50-87% higher marker retention than standard bituminous marker adhesive (Type I) in heavy traffic conditions (>200,000 vehicles daily), with savings from retained markers offsetting any cost differential.

Flexible Pavement Marker Adhesive:

- Cures quickly - open to traffic in just five minutes
- Works with most marker types
- Reduces marker loss from snow plows and summer heat
- Exceeds ASTM D4280 and D4383 Type II specifications

See the difference with Crafcro Flexible Marker Adhesive, and upgrade your Crafcro Super Shot with a Shot Timer Kit, shorter wand, and foot pedal kit for maximum efficiency when installing markers.

The Crafcro QwikStix are a fast and easy solution to install single pavement markers on asphalt or concrete with only a torch. Peel back the self-release cardboard box and melt just enough to do the job.
