

# RoadSaver Gray Sealant

## Same Performance. Discreet Look.

Crack sealing is the most cost-effective method of pavement preservation, and aesthetic considerations may call for an alternative to conventional black sealant when sealing cracks in lighter pavements. Crafcro RoadSaver 960 & 963 Gray Sealants offer the same reliable performance as our black asphalt-based sealants, with an inconspicuous gray color that blends into Portland Cement Concrete and oxidized Asphalt Pavements. RoadSaver Gray Sealant's adhesive strength and flexibility provide an effective seal without calling attention to the repair.

### BENEFITS

Excellent adhesion  
and flexibility

Easy to apply with conventional  
crack sealing equipment

Long-lasting performance

## Seamlessly Blend with Lighter Pavements

### RECOMMENDED USES

Sealing cracks in concrete or oxidized asphalt

Highways

Bridges

Airport runways

Parking Lots

Any application where gray color is desired

### FEATURES AND BENEFITS

- Proprietary blend of resins and polymers for increased durability and long-lasting performance in all climates
- Hot-applied using conventional crack sealing equipment
- Prevents moisture, chemicals and debris from entering crack/joint
- Resists turning black from vehicle traffic and weathering
- Supplied in powder/granular form and packaged in 35 lb. meltable bags for no cardboard waste.
- RoadSaver 960 meets ASTM D6690 Type I specifications
