

# RoadSaver® Gray Sealant

## Same Performance. Discreet Look.

Crack and joint sealing is the most cost-effective method of pavement preservation, and aesthetic considerations may call for an alternative to conventional black sealant when sealing cracks and joints in lighter pavements. Crafco RoadSaver® 960 & 963 Gray Sealants offer the same reliable performance as our black asphalt-based sealants, with an inconspicuous gray color that blends into Portland Cement Concrete and oxidized Asphalt Pavements. RoadSaver Gray Sealant's adhesive strength and flexibility provide an effective seal without calling attention to the repair.

### BENEFITS

Excellent adhesion  
and flexibility

Easy to apply with conventional  
crack sealing equipment

Long-lasting performance

## Seamlessly Blend with Lighter Pavements

### RECOMMENDED USES

Sealing cracks in concrete or oxidized asphalt

Highways

Bridges

Airport runways

Parking Lots

Any application where gray color is desired

RoadSaver® Gray 960 and 963 sealants deliver superior joint sealing for concrete pavements, meeting the highest industry standards for durability and flexibility while being gray in color to match concrete pavements.

### RoadSaver Gray 960

- Meets ASTM D6690 Type I (formerly ASTM D1190).
- Ideal for sealing joints in flush or recessed applications up to 3/8" (10 mm).

### RoadSaver Gray 963

- Versatile application options: overband, flush fill, or underfill up to 3/8" (10 mm).
- Engineered for long-lasting adhesion and resistance to weather extremes.

### FEATURES AND BENEFITS

- Proprietary blend of resins and polymers for increased durability and long-lasting performance in all climates.
- Hot-applied using conventional crack sealing equipment.
- Prevents moisture, chemicals and debris from entering crack/joint.
- Resists turning black from vehicle traffic and weathering.
- Supplied in powder/granular form and packaged in 35 lb. meltable bags for no cardboard waste.
