

MAKING CRACK SEALING SAFER AND MORE EFFICIENT.

Introducing the Super Shot Flex Boom, the latest innovation from Crafcro. Over the years, the engineering team at Crafcro has been developing new and innovative features for its melters/applicators that have improved the safety and efficiency of crack sealing operations for contractors and agencies.

The Super Shot Flex Boom makes crack sealing safer and more efficient by lightening the weight of the wand for the operator. The Super Shot Flex Boom effortlessly raises up and down on a gas strut to help keep the hose from dragging on the ground when close to the melter, while still providing the operator maximum work radius as they work away from the melter.

SUPER SHOT FLEX BOOM FEATURES AND BENEFITS

- **Gas strut with adjustable mount locations** - Set ideal force to raise and lower the boom.
- **Swiveling hose hangers and guard plate** - Protect hose from wear points, improving longevity.
- **Adjustable brake** - Fine-tune the rotational speed and resistance to operator preference.

Standard on all Super Shot 125 and 250 models and coming soon to the Super Shot 60D.
